Ultimate Music Tagger

A simple, efficient and user-friendly music tagger program with multi-tags tagging for the professional usage. The program offers a clean interface which is well suited for music lovers and an easy way to tag and organize music files and folders (also named the order of the songs).Main features: Main user interface The tool is designed to be simple and intuitive to use. The interface is clean and easy-to-use. The application offers two panels on the right side of the main window. The

first one is used to select the items to be tagged or to tag the entire files from a selected list. The second panel is used to show the list of the selected items and to rename the items according with various preset pattern rules or save them with an optional new pattern. File renaming panel is sort of a powerful feature. The one can fine-tune the folder or file renamings by adding extra information about the selected items, including artist name, album name, and cover art. Instant search The instant search feature gives you the opportunity to speed up the selection process, and it will display a dialog with search results. Multi-tags tagging Multi-tags tagging is available from the version 1.0.4. You can enable one or more types of info on the selected files and create custom tags. Settings The settings panel is located under the main menu. Here you can access all settings of the program. Backup feature To make your tagging experience easier, you can backup the tagging results into the XML format. It is possible to keep the backup files on the local hard drive and restore them if the database (created by the XML files) becomes damaged. Saving audio files in the project The application is capable to save the project into the selected project/folder. You can run the program with the selected option on a different folder. All tags will be saved on the new folder. Preferences The program's preferences panel gives you the opportunity to change the program interface layout, colors of the interface, autosave options, status icons, and other stuff. Command line parameters Command line parameters can be used to call the program automatically. You can specify these options in the %SystemRoot%\system32\run.exe or %SystemRoot%\system32\cmd.exe. For example, you can use the following command to start your program and save the tags for your music collection on a new folder: c: SetFile b7e8fdf5c8

Ultimate Music Tagger is a small software application designed to help you organize your music library by tagging audio files and renaming them with the aid of preset patterns. It proves to be particularly useful especially if you have a large music collection which includes missing information about artist, album, title, or other details, as the tool grabs data about tracks from online sources, such as Last.fm or MusicBrainz database. Clean feature lineup The well-organized set of features makes the entire process seem nothing but a child's play. Plus, the multi-tabbed interface helps you switch between the Tag and Rename panel with minimal effort. You can specify the saving directory that contains your music library and apply filters by file extension. It automatically processes the audio files and displays them in the primary panel. Tagging capabilities The tool offers support for several tagging modes which are built specifically for helping you tag files according to the order of the selected track list or tag the selected items by matching the name or number that is displayed near the filename (if it exists). You can tag your audio files by adding information about track (title, number, artist, genre) and album (album, artist, and year). Additionally, the tool is able to download cover images from the Internet, which can be exported to JPG, BMP, or GIF file format, and you can manually upload a picture from your computer (e.g. JPG, BMP, GIF, TIF, PNG). Renaming options The utility allows you to select the online source from where the program grabs data about your songs and provide details about the track, artist, and album. It offers support for several tagging modes which are built specifically for helping you tag files according to the order of the selected track list or tag the selected items by matching the name or number that is displayed near the filename (if it exists). Music Fanatic is a modern CD music player, with multiple views, and a full-featured tag editor. Browse your music collection, add a tag to each track, and enjoy your music instantly. Add multiple tags to your tracks, browse a collection in different views, and more. Set up presets that add a single tag to each track and save them to help you quickly add tags whenever you want. Then rename the tags, and visually sort your tags in order of most recent, most played, or most important. Add your entire music collection to a playlist and use music search to instantly find your favorite song! The innovative tag editor allows you to create your own search and browse scopes for tags, and includes support for Hot Tag, Brain, WaiWai, SoundHound, and Last.fm. Music Fanatic is like having a tagging assistant automatically add tags to your tracks for you, and help you organize your music into playlists, whether you want to listen to just one album, or read the lyrics of a song. It is the intelligent CD music player to explore your music collection. Scream Mixer is a multimedia tool developed by Screamer to help you protect your personal files and folders from unauthorized access. The program makes the job of auditing your system quite simple and eliminates the possibility of potentially harmful or frustrating data loss. Scream Mixer Scans All Data on the System. The application monitors all data in all folders of your system, including all items associated with the program itself, making sure that none of them remain unreadable. That is the best thing about Scream Mixer - it spots all the items that you've managed to hide from the user, and, based on that information, suggests folders that you can move the data into, to make sure that no one else can access them. The program ensures that you don't have to make any effort to prevent an intruder from accessing your files - it takes care of everything for you, leaving you free to do other things. The software adds all new files to the program. Scream Mixer, unlike similar tools, doesn't just go

through your system and extract the information - it also adds new items to the tool to make sure that it will spot every new file. That way, you'll always have the latest info on your hard drive, no matter what other applications you might have opened. The tool is able to scan all your
